DESCRIPTORS College Graduates; Educational Research; *Employment Patterns; *Followup Studies; *Graduate Surveys; Higher Education; *Occupational Surveys; *Preservice Education; Vocational Followup
IDENTIFIERS Arkansas

ABSTRACT

A survey was conducted of teacher education institutions in the state of Arkansas to determine the present occupation of students who graduated in 1976-1977. Graduates were classified as elementary, secondary, and special education teachers; male and female; and by the institution they graduated from. Six areas of occupation were examined: (1) teaching in state; (2) teaching outside of state; (3) otherwise employed; (4) continuing formal study; (5) military service; and (6) homemaking. Results of the survey are presented in tabular form. The rank of each institution in each of the six categories explored is presented. (JD)

THE TEACHER EDUCATION CLASS OF 1977 IN ARKANSAS INSTITUTIONS

by

Jerry H. Robbins

Fifteen of the sixteen Arkansas teacher education institutions reported that 2354 persons graduated from teacher education programs in 1976-1977. What happened to these persons?

Only about 1109 (47%) of the graduates were known to be teaching in the state on November 1, 1977. Approximately 192 (8%) were known to be teaching outside the state on that date. Thus, a slight majority (55%) were known to have entered the teaching profession immediately after graduation.

About 12 per cent (293 graduates) were known to be employed in positions other than teaching on November 1, 1977. Another 8 per cent (193 students) were known to be continuing their formal education on that date.

Only 26 students (1%) of the graduates were known to have entered military service immediately after graduation, and only 53 students (2%) were known to have become full-time homemakers.

Seventy students (3%) were known to be seeking a teaching position on November 1, 1977, and three students (0.1%) were known to be seeking a non-teaching position.

However, no information was available from one of the institutions (a small one, though) and, among the other fifteen institutions, no

information was available for 415 (18%) of the graduates. The data from which these calculations were made are found in the Appendix.

To what extent does this distribution of the graduates of the teacher education class of 1977 hold up by classification of elementary/secondary/special education, by male/female, and by institution? Rankings which partially answer this question are given in the tables that follow.

Source of Data

Each year each of the sixteen teacher education institutions submits to the Arkansas Department of Education TS & D Form II, "Occupation on November 1, 19--, of Graduates Completing Preparation in 19-- - 19-- with qualifications for Standard Teaching Certificates in Arkansas." This form asks for the "Occupation on November 1, 19--" of the graduates classified by teaching in state, teaching outside state, otherwise gainfully employed, continuing formal study, military service, homemaking, seeking a teaching position, seeking a non-teaching position, no information and total. The forms which were submitted to the Department of Education in the spring of 1978 included actual figures for the 1976-1977 academic year.

Each of the sixteen institutions was asked to furnish to the author a copy of the form that had been submitted to the Department of Education. Eleven of the institutions provided this information. Henderson State University provided instead a copy of the "Placement Service Annual Report." From this document, it was possible to

complete a portion of the TS & D Form II for that institution, but it was not possible to make the totals agree.

After several requests did not produce the forms from the remaining four institutions, the Department of Education was asked for copies of the forms from these institutions and they were supplied. However, Arkansas College had furnished no information on this form to the Department of Education. In summary, the data in this report were taken directly from the TS & D Form II reports submitted by the institutions, with the two exceptions. It must be noted that despite instructions to the contrary, the number of teachers reported by several institutions on TS & D Form II did not agree with the numbers of teachers reported on TS & D Form I for the same period of time.

Teaching in State

Table 1 presents a ranking of the institutions by the number of graduates who were known to be teaching in the state on November 1, 1977. Table 2 presents the same information for male elementary graduates. Table 3 presents the same information for female elementary graduates, and Table 4 presents the same information for all elementary graduates.

Table 5 presents a ranking of the institutions by the number of male secondary graduates known to be teaching in the state on November 1, 1977. The same information for female secondary graduates is presented in Table 6, and the same information for all secondary graduates is presented in Table 7.

In Table 8 may be found a ranking of the institutions by the number of male special education graduates known to be teaching in the state on November 1, 1977. Tables 9 and 10 present the same information for, respectively, female special education graduates and all special education graduates.

Although the University of Arkansas is the state's largest producer of teachers, it ranks at the top for graduates known to be teaching in the state only in the categories of male secondary and total secondary. It is tied with Arkansas State University in the number of female secondary graduates known to be teaching in the state. Arkansas State University leads in the total number of graduates, male elementary, female elementary, total elementary, male special education, female special education, and total special education.

Ouachita Baptist University generally ranks considerably ahead of the other non-public institutions in all categories, and it ranks near the top among all institutions in the state in all categories.

Teaching Outside State

Table 11 presents a ranking of the institutions by the number of graduates who were known to be teaching outside the state on November 1, 1977. Table 12 presents the same information for male elementary graduates, Table 13 presents the same information for female elementary graduates, and Table 14 presents the same information for all elementary graduates.

Table 15 presents a ranking of the institutions by the number of male secondary graduates known to be teaching outside the state on November 1, 1977. The same information for female secondary graduates is presented in Table 16, and the same information for all secondary graduates is presented in Table 17.

In Table 18 may be found a ranking of the institutions by the number of male special education graduates known to be teaching outside the state on November 1, 1977. Tables 19 and 20 present the same information for, respectively, female special education graduates and all special education graduates.

One might expect the state's largest teacher education institution to also be the state's largest exporter of teachers, and the tables above show this to be generally true. The University of Arkansas leads in the number of graduates known to be teaching outside the state and in the categories of female secondary, total secondary, female special education, and total special education. However, the University of Arkansas is tied with Harding College in the category of female elementary and with John Brown University in the category of male secondary.

Arkansas State University leads the state in the number of male elementary teachers known to be teaching outside the state. Harding College leads the state in the number of elementary teachers known to be teaching outside the state, and the University of Central Arkansas had the only male special education teacher known to be teaching outside the state.

There seems to be some tendency for those institutions located near the borders of the state to rank relatively high in the number of teachers known to be teaching outside the state, including the University of Arkansas, Arkansas State University, and John Brown University. The reverse is also generally true, with the institutions located near the center of the state often reporting few, if any, graduates teaching out of state, especially Philander Smith College, Hendrix College, Arkansas Tech University, and the University of Central Arkansas.

Otherwise Gainfully Employed

Table 21 presents a ranking of the institutions by the number of graduates who were known to be otherwise gainfully employed on November 1, 1977. Table 22 presents the same information for male elementary graduates, Table 23 presents the same information for female elementary graduates, and Table 24 presents the same information for all elementary graduates.

Table 25 presents a ranking of the institutions by the number of male secondary graduates known to be otherwise gainfully employed on November 1, 1977. The same information for female secondary graduates is presented in Table 26, and the same information for all secondary graduates is presented in Table 27.

In Table 28 may be found a ranking of the institutions by the number of male special education graduates known to be otherwise gainfully employed on November 1, 1977. Tables 29 and 30 present the same information for, respectively, female special education graduates and all special education graduates.

The University of Arkansas leads the state in the number of graduates known to be otherwise gainfully employed, and the University of Arkansas ranks at the top in the categories of female elementary, total elementary, male secondary, female secondary, and total secondary. Arkansas State University and the University of Arkansas at Pine Bluff rank at the top in the numbers of special education graduates otherwise gainfully employed.

Continuing Formal Study

Table 31 presents a ranking of the institutions by the number of graduates who were known to be continuing formal study on November 1, 1977. Table 32 presents the same information for male elementary graduates. Table 33 presents the same information for female elementary graduates, and Table 34 presents the same information for all elementary graduates.

Table 35 presents a ranking of the institutions by the number of male secondary graduates known to be continuing formal study on November 1, 1977. The same information for female secondary graduates is presented in Table 36, and the same information for all secondary graduates is presented in Table 37.

In Table 38 may be found a ranking of the institutions by the number of male special education graduates known to be continuing formal study on November 1, 1977. Tables 39 and 40 present the same information for, respectively, female special education teachers and all special education teachers.

Arkansas State University leads the state in the number of graduates known to be continuing formal study, and the institution leads in the categories of female elementary, total elementary, female secondary, total secondary, male special education, female special education, and total special education. Henderson State University leads in the category of male secondary.

It may be more than coincidence that the institutions at the top of the total ranking have graduate programs and those at the bottom of the total ranking do not have graduate programs.

Military Service

Table 41 presents a ranking of the institutions by the number of graduates who were known to be in military service on November 1, 1977. Only one elementary graduate, a male from Ouachita Baptist University, was known to be in military service at that time. Table 42 presents a ranking of the male secondary graduates who were known to be in military service, Table 43 presents the same information for female secondary graduates, and Table 44 presents the same information for all secondary graduates.

There were no special education graduates who were known to be in military service at that time.

The number of students entering military service is small, and most of these are male secondary graduates. The majority of these come from the University of Arkansas, the University of Arkansas at Pine Bluff, Arkansas State University, and Henderson State University.

Homemaking

Table 45 presents a ranking of the institutions by the number of graduates who were known to be engaged in full-time homemaking on November 1, 1977. There were no male elementary graduates known to be involved in homemaking at that time, and the data in Table 46, for the total of elementary graduates, represents all females. The same situation is true for male secondary graduates, and the data in Table 47, for the total of secondary teachers, represents all females. One female special education graduate, from the University of Arkansas, was engaged in full-time homemaking on November 1, 1977.

The University of Arkansas is by far the largest producer of graduates who become full-time homemakers, and most of these are secondary graduates.

Seeking Teaching Position

Table 48 presents a ranking of the institutions by the number of graduates who were known to be seeking a teaching position on November 1, 1977. There were no male elementary graduates known to be seeking a teaching position at that time, and the data in Table 49, for the total of elementary graduates, represents all females.

Table 50 presents a ranking of the male secondary graduates who were seeking a teaching position, Table 51 presents the same information for female secondary graduates, and Table 52 presents the same information for all secondary graduates.

Tables 53, 54, and 55 present, respectively, the rankings for male special education graduates, female special education graduates, and all special education graduates.

Considering the national publicity about the difficulty of finding teaching positions, it is important to note the relatively small number of graduates who were reported as being unable to find positions. Arkansas State University reported the largest number of graduates seeking teaching positions in almost all categories. The reader's attention is directed to the fact that a number of institutions reported very few or no graduates seeking teaching positions.

No male elementary graduates were reported as seeking teaching positions, and the number of male secondary graduates reported is considerably less than half of the number of female secondary graduates reported. The number of elementary graduates reported seeking teaching positions is much smaller than the number of secondary graduates.

Seeking Non-Teaching Position

Only three graduates were reported as seeking a non-teaching position as of November 1, 1977. These included one female elementary graduate from the University of Arkansas at Little Rock, one female secondary graduate from Harding College, and one male special education graduate from Arkansas State University.

No Information

Table 56 presents a ranking of the institutions by the number of graduates about whom there was no information on November 1, 1977. Table 57 presents the same information for male elementary graduates, Table 58 presents the same information for female elementary graduates, and Table 59 presents the same information for all elementary graduates.

Table 60 presents a ranking of the institutions by the number of male secondary graduates about whom there was no information on November 1, 1977. The same information for female secondary graduates is presented in Table 61, and the same information for all secondary graduates is presented in Table 62.

In Table 63 may be found a ranking of the institutions by the

number of male special education graduates about whom there was no information on November 1, 1977. Tables 64 and 65 present the same information, respectively, for female special education graduates and all special education graduates.

The University of Central Arkansas led the rankings in the total number of graduates about whom there was no information and it led in the categories of male elementary, female elementary, total elementary, and male special education. Harding College led the rankings in the categories of male secondary and total secondary. The University of Arkansas at Pine Bluff led the rankings in the categories of female secondary, female special education, and total special education.

Of 2404 graduates reported in the totals, 415 (17%) were classified as "no information." The comparable figures for the various classifications are given below:
